

APPROVED COP Programmatic Goals:

The ideal Roseman graduate should be able to:

1. Utilize knowledge accrued from relevant foundational and pharmaceutical sciences as the basis to design, implement, manage, and optimize patient care in accordance with evidence-based medicine.
2. Retrieve, evaluate, and apply evidence-based medicine through the use of appropriate resources in pharmacy practice.
3. Demonstrate effective communication skills and strategies across a variety of platforms to communicate relevant medical information to patients, caregivers, and other healthcare professionals (stakeholders).
4. Evaluate patient- and population-based needs to promote disease prevention, disease management, and health and wellness.
5. Advocate for patient-centered care with consideration of cultural awareness and social determinants of health.
6. Identify and implement concepts of storage, packaging, handling, delivery systems, and disposal of pharmaceutical products.
7. Demonstrate proper procedures and techniques to fulfil a medication order including: use of equipment for drug preparation, compounding, and administration of hazardous and non-hazardous, sterile and nonsterile products.
8. Apply knowledge regarding health systems, payer options, and pharmacoeconomic principles to evaluate drug therapy and health outcomes.
9. Practice pharmacy ethically while following federal and state laws and regulations.
10. Demonstrate professionalism, self-awareness, leadership, life-long learning, and innovation to drive advances in the pharmacy profession and to improve personal development.
